

Software Development Engineer (SDE) Intern

Synapse Analytics Pvt. Ltd.

About the Role

Synapse Analytics is hiring a Software Development Engineer Intern to join our backend engineering team. You will design, build, and maintain scalable backend services, working closely with senior engineers on real production systems.

Responsibilities

- Design and implement backend services and REST APIs
- Write clean, well-tested code following object-oriented design principles
- Work with relational and NoSQL databases to store and query application data
- Debug and optimize existing systems for performance and reliability
- Participate in code reviews, sprint planning, and daily stand-ups
- Apply data structures and algorithms to solve engineering problems efficiently
- Contribute to system design discussions for new features

Required Skills

- Java
- Python
- Data Structures
- Algorithms
- OOP
- System Design
- REST API
- SQL
- Git

Preferred Skills

- Spring Boot
- Docker
- AWS
- MongoDB
- Linux
- Microservices

Qualifications

- Pursuing or recently completed a Bachelor's degree in Computer Science, IT, or a related field
- Strong foundation in data structures, algorithms, and object-oriented programming
- Prior internship or project experience building backend systems is a plus
- Comfortable working independently and in a small team
